Blood Work (in-house) SPECIAL: \$87

PLUS

FREE Oravet Dental Chews!!

*Dental cleaning must be scheduled for **February** . . . so come in **now** for your **COMPLIMENTARY** oral exam.
Pre-anesthetic blood work requirements will also be discussed at that time.*

Most, but not all, adult pets (dogs over 3 and cats over 4) need periodic dental cleanings. Please bring your pet in to have a **COMPLIMENTARY** oral exam done by one of our doctors. (No appointment necessary!) We will provide you with a treatment plan based on your pet's oral exam.

Treatment plans differ because of the size, age and /or general health of your pet, and the condition of teeth and gums. We have two levels of oral cleaning; Stage 1 or 2 and Stage 3 or 4.* The doctor will explain which level of cleaning is necessary for your pet, and when the pre-anesthetic blood work should be done.

Why Dental Care Is Important

Proper dental care can detect dental disease that not only affects the mouth (bad breath for example), but can also lead to more serious health problems such as heart, lung, and kidney disease.

* See our website for educational materials (Dental Report Card for the stages of periodontal disease) and what is included in our Dental Cleaning Package.
